Milton Keynes, United Kingdom

IN COLLABORATION WITH

BRITISH FENCING

British Fencing
London, United Kingdom

Abstract

This project will create a web service capable of storing and serving up the results of fencing competitions.

Problem Definition

The sport of Fencing has a fairly small but loyal following in the UK. As such, the support systems around the sport are not as developed as they are in other sports. The National Governing Body of Fencing in the UK, British Fencing, host the results of fencing competitions on their website. The results are represented as static HTML files and there is no way to present the data other than as a list of the results of each competition (i.e. you can't view all of the results of a particular fencer).

4.4 Acknowledgments

I would like to acknowledge the assistance of the many people that have helped me with this project, including my tutor Prof Peter Smith, Katie Rhodes from British Fencing, members of the SportsML Yahoo mailing list and, most of all my long-suffering wife Abby and our dog Dotty - I'll start paying a bit more attention to you both again now!
